PROFESSIONAL SUMMARY

Senior Full-Stack Engineer and Team Lead with 8+ years of experience architecting and delivering high-impact SaaS and FinTech platforms. Specialist in TypeScript-first, cloud-native microservices and distributed systems, with a proven track record leading legacy-to-modern migration programmes — including migrating monolithic services into TypeScript/Node.js microservices with full behavioral parity validation. Key achievements include reducing AWS costs by 66%, improving application performance by over 70%, and leading remote engineering squads to successful product launches. Hands-on with Fastify, NestJS, Express, React 18, PostgreSQL, and the full AWS ecosystem.

TECHNICAL EXPERTISE

Backend: Node.js, NestJS, Fastify, Express, TypeScript, PHP (Laravel)

Frontend: React 18, Next.js 14, Vue.js, Nuxt.js, Tailwind CSS

Databases: PostgreSQL (Aurora), Redis/Valkey, DynamoDB, MongoDB, MySQL

Cloud & Infrastructure: AWS (Lambda, Fargate, ECS, API Gateway, S3, RDS Aurora, CDK, SNS/SQS, MSK Kafka), Docker, Terraform

Architecture & DevOps: Microservices, CQRS, DDD, Event-Driven Systems, CI/CD (GitHub Actions, Jenkins), IaC (CDK, Terraform, CloudFormation)

Integrations: REST, GraphQL, Webhooks, OAuth2, JWT, Third-Party APIs (Paystack, Stripe, Twilio, OpenAI)

Monitoring: AWS CloudWatch, Sentry, Datadog, Logging, Alerting

Leadership: Technical Team Lead, Agile/Scrum, Remote Team Management, TDD, Code Review, Migration Governance, Clean Architecture

PROFESSIONAL EXPERIENCE

Team Lead / Lead Software Engineer (Contract) | **Collectwire Technologies** | Delaware, USA (Remote)

Nov 2024 – Present

- Led a squad of 4 engineers as technical team lead, architecting and delivering a global payroll SaaS MVP across 8 event-driven TypeScript microservices — setting code standards, running code reviews, and owning all architectural decisions through to beta launch within 7 months.
- Slashed AWS infrastructure costs by 66% (from \$200+ to \$67/month) by migrating to TypeScript CDK and strategically rightsizing cloud resources.
- Accelerated team delivery by 3x by embedding AI-assisted development tools (Cursor, Claude) into architecture design, documentation, and cost-benefit analysis workflows.
- Reduced redundant API calls by up to 80% across three frontend applications by standardising multi-tenant request headers and implementing a robust RTK Query caching strategy.

Senior Software Engineer | **Receeve GmbH** | Hamburg, Germany (Remote)

Jan 2023 – Sep 2024

- Migrated a legacy monolithic orchestration service into three TypeScript serverless microservices on AWS Lambda, preserving full behavioral parity while improving execution speed by 47% and reducing cold start latency through targeted optimisation.
- Decreased API response times by 35% by implementing a CQRS architecture with a GraphQL Gateway, enabling independent scaling of read and write operations.
- Integrated OpenAI APIs to power AI-driven summaries and payment predictions, improving customer engagement by 10% and reducing manual review time by 25%.

- Achieved 99.9% deployment reliability via IaC with AWS CDK and GitHub Actions, including automated integration tests to validate correctness and parity across multi-environment deployments.

Software Engineer | **Immutable X** | Sydney, Australia (Remote)

Aug 2021 – Nov 2022

- Led revamp of the NFT checkout and payment flow, migrating legacy transaction logic into modern fintech payment integrations and improving wallet UX for smoother digital asset purchases.
- Designed and implemented Wallet and Order microservices using NestJS, Kafka, and PostgreSQL, ensuring consistent and fault-tolerant transaction processing.
- Built Redis-based distributed locking (Redlock) to prevent duplicate NFT minting in concurrent transactions, improving reliability under high load.
- Automated containerised deployments on AWS ECS with CloudFormation, improving release stability and developer velocity.
- Contributed to Solidity smart contract updates, ensuring secure on-chain asset transfers and compatibility with evolving platform standards.

Software Engineer | **Jiggle Limited** | Uyo, Nigeria

Nov 2019 – May 2021

- Co-founded the platform and architected a multi-currency digital wallet system with a distributed PostgreSQL ledger, supporting 10,000+ users with sub-second transaction processing.
- Increased successful payment transactions by 20% by integrating Paystack gateway with secure bank transfer APIs, automated reconciliation, and robust webhook handling.
- Scaled the engineering team from 3 to 7 members, establishing coding standards, conducting technical interviews, and mentoring junior developers on full-stack best practices.

Full Stack Engineer | **VisionDev** | Provo, USA (Remote)

Jan 2017 – Oct 2019

- Reduced manual data entry by 28% and improved payroll accuracy for 500+ employees by building an automated timesheet system integrating the Twilio SMS/Voice API.
- Developed Inventory, POS, and Digital Wallet APIs for a multi-tenant SaaS platform, ensuring strict data isolation and role-based access control for 50+ enterprise clients.

EDUCATION

Bachelor of Engineering (B.Eng.), Mechanical Engineering

University of Port Harcourt, Nigeria
