David Inyang-Etoh

Lead Software Engineer | Node.js, TypeScript, NestJs, React | AWS & Microservices | FinTech & SaaS | Cost & Performance Optimizer
Uyo, Akwa Ibom State, Nigeria

Summary

I'm a Lead Software Engineer with 8+ years of experience building and scaling SaaS and FinTech platforms across Europe, the U.S., and Africa.

- I specialize in cloud-native, event-driven microservices — helping teams migrate from monolithic systems to distributed architectures that are reliable, cost-efficient, and easy to scale.
- Over the years, I've led remote engineering teams to architect, optimize, and deliver production-grade systems that achieved measurable business impact — from cutting AWS costs by 66%, to boosting app performance by 70%, and launching multiple global products under tight timelines.
- I enjoy solving complex backend challenges, mentoring engineers, and leveraging AI-assisted development tools to accelerate design, documentation, and code quality.

Core Focus Areas:

Node.js • TypeScript • NestJS • AWS (Lambda, Fargate, CDK, SNS/SQS, DynamoDB) • Distributed Systems • DDD • CQRS • Event-Driven Architecture

Selected Highlights:

- Architected and launched a global payroll SaaS MVP with 8 event-driven microservices in 7 months.
- Reduced AWS infrastructure costs by 66% through CDK migration and cloud resource optimization.
- Designed a CQRS + GraphQL gateway that improved API performance by 35%.
- Integrated OpenAI APIs for intelligent summaries and payment predictions.
- Achieved 99.9% system uptime through IaC automation and continuous delivery pipelines.

Currently open to senior or lead backend/cloud roles in FinTech, SaaS, or AI-integrated platforms

Experience

Collectwire

Lead Software Engineer

January 2025 - Present (1 year 3 months)

- Led a team of 4 engineers to design and deliver a global payroll SaaS MVP built with 8 event-driven microservices, successfully launching the beta within 7 months.
- Reduced AWS infrastructure costs by over 60% through CDK migration, resource optimization, and right-sizing compute workloads.
- Improved team delivery velocity by 3× using AI-assisted tools (Cursor, Claude) for documentation, code reviews, and architectural planning.
- Implemented a multi-tenant API design and caching layer (RTK Query + Redis), cutting redundant frontend API calls by nearly 80%.
- Championed best practices in TypeScript, DDD, and CQRS, establishing coding standards and review processes across services.

receeve

Senior Software Engineer (Node.js/AWS)

January 2023 - September 2024 (1 year 9 months)

Hamburg, Germany

- Modernized a core orchestration engine by migrating from a monolith to serverless AWS Lambda services, improving execution speed and scalability.
- Designed a CQRS + GraphQL gateway architecture, reducing API latency by 35% and improving query efficiency across distributed services.
- Integrated OpenAI APIs to automate payment summaries and risk insights, reducing manual review time and improving customer engagement.
- Introduced Infrastructure as Code with AWS CDK and GitHub Actions, achieving 99.9% deployment reliability and fully automated multi-env releases.
- Collaborated cross-functionally with data and product teams to ensure consistent delivery and observability in production systems.

Immutable

Full Stack Software Engineer (Node.js/React)

September 2021 - November 2022 (1 year 3 months)

Sydney, New South Wales, Australia

- Led the revamp of the NFT checkout and payment flow, integrating fintech payment options and improving wallet UX for smoother digital asset purchases.
- Designed and implemented Wallet and Order microservices using NestJS, Kafka, and PostgreSQL, ensuring consistent and fault-tolerant transaction processing.
- Built Redis-based distributed locking (Redlock) to prevent duplicate NFT minting in concurrent transactions, improving reliability under high load.
- Automated containerized deployments on AWS ECS with CloudFormation, improving release stability and developer velocity.
- Contributed to Solidity smart contract updates, ensuring secure on-chain asset transfers and compatibility with evolving platform standards.

Jiggle

Software Engineer / Co-Founder

November 2019 - June 2021 (1 year 8 months)

Uyo, Akwa Ibom, Nigeria

- Co-founded and architected a multi-currency digital wallet powered by a distributed PostgreSQL ledger, supporting over 10,000 active users.
- Integrated Paystack and Flutterwave for seamless bank transfers, reconciliation, and webhook-based payment verification.
- Established team standards and code reviews, mentoring junior developers and scaling the engineering team from 3 to 7 members.
- Implemented early analytics and transaction monitoring dashboards for business reporting and fraud detection.

VisionDev

Full-Stack Engineer (Laravel/Node.js/Vue.js)

January 2017 - October 2019 (2 years 10 months)

Provo, Utah, United States

- Developed an automated timesheet and payroll system integrated with Twilio SMS/Voice APIs, reducing manual entry and improving accuracy for 500+ employees.
- Built and maintained Inventory, POS, and Digital Wallet APIs for a multi-tenant SaaS platform with granular role-based access control.
- Refactored a legacy ticketing platform from monolithic to modular architecture, improving maintainability and release cycles.
- Collaborated with UI/UX teams to modernize frontends using Vue.js and streamline API integrations with backend services.

Education

University of Port Harcourt

B.Eng, Mechanical Engineering · (September 2005 - August 2012)
